

## GNB Easy Pick

### Battery Selection System – ‘Take the green one’

GNB's ‘Easy Pick’ system is an easy to use battery selection system to ensure the first 100% charged battery is the first battery picked – ‘take the green one’.

By ensuring the first charger to be fully charged is the battery to be used first offers a highly effective technique to preserve battery lifespan and optimises the battery fleet operation.

Up to 30 chargers can communicate in anyone group, simple, user friendly, plug and play installation. By only showing only one charger with the green LED's illuminated and flashing back light.

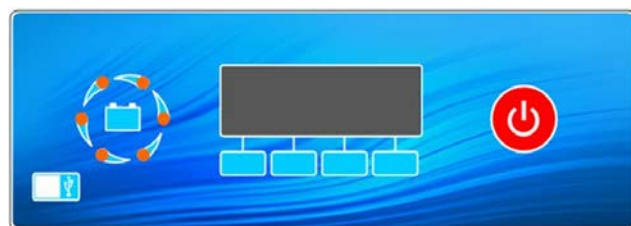

One ‘MASTER’ charger is required per group (same battery type) this is fitted with an internal audio alarm sounding if the wrong battery is taken (picked)

Can be applied to all the GNB charger range with the exception of the SP. i.e. HP & LP

#### The One to Take – ‘Priority’ fully charged

#### Fully charged in the queue

#### ‘Take the green one’

- › Simple First Charged / First Out battery priority system
- › A highly effective technique to preserve battery lifespan and optimises the battery fleet operation
- › Simple and user friendly
- › Only 1 charger shows the Green LED's and flashing the LCD back light
- › Other chargers that have batteries fully charged are in a queue, these chargers show Amber LED's
- › When the priority ‘Green’ battery is taken the next charger in the queue becomes the ‘Green one’
