

## Product Information

### Recombination Plugs

New recombination plugs from GNB are now available for stationary flooded lead-acid cells and blocks. These plugs allow customers to strongly reduce the need for water refilling as well as the ventilation requirements, without switching to valve-regulated technology.

The recombination plug highly **reduces the gas release** and consequently the ventilation requirements acc. to EN 50272-2 / IEC 62485-2. Finally the recombination plug **reduces watering** quantities and **extends topping up intervals**.
