Classic OPzS Cells: New Post Sealing Design

A new post sealing design has been fully tested and validated in order to increase the productivity and reliability of the Classic OPzS cells and Classic OPzS Solar cells. This new design will be progressively implemented in the beginning of 2014 (small cells from January, large cells from February). There is no change regarding technical features such performance, design life and cycle life of the cells; the part numbers will remain the same.

The overall dimensions of the cells will not change, but the position of the insert from the lid will be +4 mm higher. Therefore, to replace a cell within an existing installation, please select the option of flexible inter-cell connectors (part number CC...FSSA). The insert will not change, it remains female M8.

Appearance of the new OPzS cell with the optimized design:

Date: December 17th, 2013
