New Sprinter XP-FT Range

GNB[®] Industrial Power is pleased to announce the addition of a new range to the AGM Network Power portfolio: Sprinter XP-FT. It combines the advantages of the well proven and reliable Sprinter XP design, which brings extraordinarily high performance in short discharge power and high availability particularly for UPS applications, with the convenience of the Front Terminal design.

Compared to other Front Terminal batteries, the new Sprinter XP-FT boasts significantly higher power density and is specifically optimized for short back-up times. Additionally, the installation and maintenance costs are greatly reduced thanks to the front access and the maintenance-free AGM technology (no topping-up).

The first model, XP12V4400FT is available now. Its dimensions are identical to the Marathon M12V155FT and fit perfectly in standard telecom cabinets.
